

**CLIMATOLOGICAL DATA FOR NOVEMBER, 1913.**

## DISTRICT NO. 9, COLORADO VALLEY.

FREDERICK H. BRANDENBURG, District Editor.

## **GENERAL SUMMARY.**

A feature of the month was the general absence of conditions favorable to the upbuilding of high pressure areas in the Great Basin, and of clear, cold, and settled weather, the usual accompaniment of such areas in the central part of the Colorado Basin and adjacent region. Instead, weather conditions were dominated by low pressure areas, attended by much cloudiness, nights warmer than usual, mean temperatures above the seasonal average, and well-distributed precipitation. Much of the precipitation was in the form of rain at moderate altitudes in the central part of the district, where, in November, it usually occurs in the form of snow. In many localities in the southern part of the district the rainfall was double or treble the usual amount. In Arizona and New Mexico where there had been a long period of deficient precipitation the rains were of inestimable value in placing the soil in excellent condition for fall work and in assuring a sufficient supply of water for range stock, besides improving the outlook for the ranges. There has been some increase in the amount of water stored in the Roosevelt Reservoir, but not nearly sufficient to insure an adequate supply for next season. At Bisbee, Ariz., damage resulted from the heavy rainfall of the 16th and 17th. In all districts the sunshine was deficient and the relative humidity much higher than the normal.

## **TEMPERATURE.**

The monthly mean temperature was  $46.3^{\circ}$ , or  $2.9^{\circ}$  above the normal. The mean for November, 1912, was  $42.6^{\circ}$ . The highest monthly mean was  $65.4^{\circ}$  at Mohawk, Ariz., and the lowest,  $27^{\circ}$ , at Fraser, Colo. Temperatures were higher than the normal, except on the 22d and 23d, and a day or two here and there. The highest temperatures generally occurred during the first decade. Readings of  $80^{\circ}$  or higher were noted at 2 stations in western New Mexico, and at the majority of stations in Arizona and southeastern Nevada. The lowest temperatures occurred principally in the last decade. Zero temperatures or lower occurred at a number of stations in the Wyoming, Utah, and Colorado areas, while freezing occurred at all stations in western New Mexico and southeastern Nevada, and at a majority of those in Arizona. The highest temperature,  $98^{\circ}$ , occurred at Parker, Ariz., on the 6th, and the lowest,  $-17^{\circ}$ , at Scofield, Utah, on the 22d.

Details of temperature are summarized in the following table:

Areas of States in District No. 9.	Temperature.					
	Mean.	Departure from normal.	Highest.	Station.	Lowest.	
Western Wyoming.....	30.5	+1.4	61	Green River.....	- 4	Willow Creek Cabin.
Western Colorado.....	36.6	+4.0	70	At 2 stations.....	-12	Dillon.
Eastern Utah.....	40.1	+1.2	77	Leeds (near).....	-17	Scofield.
Western New Mexico.....	45.9	+3.3	82	Gage.....	10	Aragon.
Arizona.....	53.6	+1.9	98	Parker.....	12	Flagstaff No. 1.
Southeastern Nevada.....	50.8	+5.3	99	Logan.....	20	Caliente.

## **PRECIPITATION.**

The average for the stations reporting was 1.92 inches, or 1.02 inches above the normal. The average for November, 1912, was 0.28 inch. Precipitation occurred somewhere in the district every day but the 9th. It was general during the first four days and from the 10th to 25th. An inch or more in 24 hours occurred 6 times in eastern Utah, 13 in western New Mexico, and 37 times in Arizona. The greatest monthly amount, 5.88 inches, occurred at Ranch, Utah, and nearly as much occurred at Thomas, Ariz. The least precipitation, a trace, occurred at Cochetopa, Colo. Monthly snowfalls of 10 inches or more occurred at 1 station in western Wyoming, 14 stations in western Colorado, and 2 in eastern Utah. The greatest monthly fall, 29.5 inches, occurred at Cascade, Colo. The average number of days with 0.01 inch or more precipitation was 5 in western Wyoming, 8 in western Colorado, 6 each in eastern Utah and western New Mexico, 7 in Arizona, and 4 in southeastern Nevada. For the district as a whole the average was 7 days.

The average precipitation and departures from the normal on the different watersheds are given in the following table:

### *Watershed.*

Green.		Grand.		San Juan.		Little Colorado.		Gila.		Mimbres.		Colorado proper.	
Average.	Departure.	Average.	Departure.	Average.	Departure.	Average.	Departure.	Average.	Departure.	Average.	Departure.	Average.	Departure.
1.07	+0.40	1.28	+0.45	2.17	+1.32	1.53	+0.50	2.40	+1.34	2.41	+1.55	1.91	+0.96

## MISCELLANEOUS.

The average amount of sunshine in percentages, with departures from the normal, was as follows: Grand Junction, 49, -20; Durango, 52, -27; Phoenix, 64, -19; and Yuma, 88, 0.

The relative humidity reported was: Grand Junction, 70, +14; Durango, 75, +7; Phoenix, 62, +17; and Yuma, 58, +14 per cent.

## SNOWFALL IN THE MOUNTAINS.

*Western Wyoming.*—The snowfall at high elevations has been above the normal, but the water content is small.

*Western Colorado.*—Up to the end of November weather conditions were not favorable to the accumulation of much snow in the mountains. October was colder and generally much drier than common. November was unusually mild, and the precipitation—much in the form of

rain—was greater than the normal in the lower drainage areas of the Grand and Gunnison. A moderate excess of precipitation also occurred in the regions drained by the Yampa, White, and San Juan, but over the upper watersheds of the Grand and Gunnison the snowfall was less than the normal. The ground for the most part is unfrozen or frozen only to a short distance below the surface.

At the close of November the average depth of snow on the Grand watershed was 6 inches, average altitude 8,900 feet; Gunnison, 7 inches for 8,900 feet; Yampa, 5 inches for 7,800 feet; and San Juan, 3 inches for 8,000 feet.

*Arizona.*—In the Apache Indian Reservation the amount of snow at the end of November below 8,000 feet was a trace; the depth at 9,000 feet, was 12 inches; and at 10,000 feet, 20 to 36 inches. In other parts of the State there was no snow of consequence at moderate altitudes at the end of the month.

TABLE 1.—*Climatological data for November, 1913. District No. 9, Colorado Valley.*

Stations.	Counties.	Elevation, feet.	Length of record, years.	Temperature, in degrees Fahrenheit.						Precipitation, in inches.						Number of rainy days, 0.01 inch or more.	Number of clear days.	Number of partly cloudy days.	Number of cloudy days.	Prevailing wind direction.	Observers.
